(54) COMMUNICATION TERMINAL

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a communication terminal that can avoid such a defect that image data are not displayed on a terminal at the other end, can effectively use a limited memory capacity, and can transmit the image with an optimal amount of data.

SOLUTION: From a telephone book memory stored in a ROM 14 or the like, display part information for the terminal at the other end is detected, and the image data adapted to the display part information are transmitted. Besides, for realizing this processing, the display part information for the terminal at the other is stored in the telephone book memory previously, which is to be performed when the image data are received from the terminal at the other end.
